

PA Students Practice Suturing in Gross Laboratory

Physician Assistants frequently repair wounds and lacerations as part of their primary care practice.

While attending class, Physical Diagnosis III, the PAS-II/second year Physician Assistant students, under the instruction of Robert Henry, PA-C (red shirt), practice their suturing skills utilizing the cadavers in the Gross Anatomy Laboratory.

“Practicing on the cadavers gives the students a better appreciation of the skin, its turgor and texture, in contrast to other methods of practice performed on oranges and pig’s feet.”
Robert Henry, PA-C
